INF3003W Business Case

The UCT sports centre website allows UCT students and staff members to browse the various clubs that the University has to offer, chat via the website, be able to register for sporting clubs online as well as be able to manage their memberships all from the same platform. There is a sophisticated reporting system that can be view by administrators. This provides many drilldown reporting functions and general overview options to the user, providing valuable information to the user. The website UI has been created with UCT students in mind with all displays having a user friendly and easy flowing information display and capturing. This website will cater for students and staff members and will be managed by the UCT sports centre administration team. This is a large improvement on the current system and we as a development team have hopes to implement this in a real life scenario for the University.
